

1. Go to PhpMyAdmin and import the sql in your created database from the extracted files.
2. Open the application/config/database.php file and change the below values with your data:

'hostname' => 'localhost',

'username' => 'MySQL username',

'password' => 'MySQL user password',

'database' => 'database name',

Finally browse the script.

Admin URL : your site/admin , Email : admin@admin.com, Password : 1234

User URL : your site/home/login , Email : guruvachanj@gmail.com, Password : 1234

Test URL : your site/home/test

Note : I am using custom template , so sql file has lot of tables please ignore all tables. I am using only Admin,Member and Score tables
